Minimum height 6m / Ideal 8m

Mattress adequate to aerials (approximate measurements 3x2x0'3m)

Lights

24 dimmer channels 2kw

Lights table

Sound

2 PA of 15" + subwoofer

2 monitors on stage

The company brings their electronic drums for live play, the venue should provide with the necessary wiring.

Assembly time: 6h

*If it happens that there is a company acting right before us, we state that we have the indispensable

need to do a quick sound check before starting our show.

Disassembly time: 1h

Other needs:

Bottles of water for each member in the company

Clean and silent space for warm up, with a flat and smooth floor

Camerino or room for make up and dressing

Information for the venue: Corn flour mixed with water is used during the show on a protector plastic surface. There is the possibility that the stage remains stained on powder after the show due to the almost immediate process of drying of the corn flour. This material is easily removed either with water or brushed with a simple broom.
